| Kaskade fabric trim for dashboard, door jambs and armrests                          | Front Intersection Assist monitors the area in front of and to the side of the vehicle at intersections and exits, using radar sensors integrated into the front of the vehicle. Within the limits of the system, it detects moving objects such as approaching cars. The system operates in a speed range up to 65 km/h. In situations deemed critical, the system issues warning messages in several stages. First, a visual and audible warning is issued.                                                                                                                                                                                                                                                                                                                                                               |
| Three-spoke leather S multifunction steering wheel with paddles                     | Manual steering wheel adjustment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

Front Emergency Brake Assist Scans  
the area in front of the vehicle and,  
depending on the situation and  
speed, can warn of an imminent  
collision and initiate appropriate  
braking measures. Pedestrians and  
cyclists can be detected up to a  
speed of around 85 km/h, and  
vehicles up to maximum speed. If an  
imminent head-on collision is  
detected, the system issues a visual,  
acoustic and haptic warning. To  
reduce speed or avoid a collision.
